EXPERIENCE

ACM FAST Karachi | Coder's Cup – Deputy *Oct 2025 – Jan 2026*

- Contributed 4 out of 7 problems to the Coder's Cup Final Round as part of a 5-member problem setting team – authored problem statements, and wrote editorial solutions for FAST Karachi's flagship intra-university programming competition
- Supported senior members in onboarding newcomers to competitive programming, communicating complex algorithmic concepts clearly to students with varying levels of experience

Self-Directed Study & Competitive Programming *2024 – Present*

- Solved 1000+ problems across Codeforces, LeetCode, Virtual Judge, and ICPC Online Judge– specializing in graph algorithms, dynamic programming, number theory, and segment trees
- Evaluated problem constraints, identified bottlenecks in brute-force approaches, and engineered optimized solutions across varying time and memory limits
- Presented technical projects to faculty panels, clearly justifying design decisions, trade-offs, and system behavior to both technical and non-technical audiences

PROJECTS

AI Resume Screening System | *Python, scikit-learn, Streamlit* *2025*

- Developed a resume screening system as a semester project; trained a Logistic Regression classifier on a Kaggle resume dataset using TF-IDF vectorization to predict the most suitable job category for a given resume – demonstrating ability to evaluate real-world documents and understand system inputs and outputs
- Implemented cosine similarity ranking to objectively compare and sort multiple candidate resumes against a job description, identifying the strongest candidates by analyzing relevance, simulating real-world hiring workflows
- Presented a working Streamlit web app supporting resume upload, job category prediction, and candidate ranking – communicating technical design decisions and system behaviour clearly to a faculty audience

Transport Route Manager | *C++, Qt, DSA* *2024*

- Designed and implemented a transport route management system with project partner to optimize route planning, evaluating system architecture trade-offs to select optimal data structures and algorithms
- Implemented Dijkstra's algorithm with a min-heap and priority queue for efficient shortest-path routing, analyzing time and space complexity to identify and eliminate performance bottlenecks
- Designed an interactive Qt interface supporting dynamic addition and removal of routes, demonstrating understanding of application architecture and user-facing software design

EDUCATION

FAST – National University of Computer and Emerging Sciences, Karachi *Jun 2028 (Expected)*

Bachelor of Computer Science | **CGPA: 3.69 / 4.0**

SKILLS

Languages: C++, Python, JavaScript (learning), HTML, CSS
Frameworks: Qt, Streamlit, scikit-learn, React (learning), Node.js (learning)
Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, AI
Tools: Git, GitHub, VS Code, Qt Creator, MySQL (learning)

HONOURS & ACHIEVEMENTS

ICPC Regional 2025-2026 – Silver Medal: Represented FAST Karachi at ICPC Regional 2025-2026, achieving a Silver Medal and ranking 5th nationally out of 100+ university teams, through rigorous analytical problem solving under pressure, competing against teams from FAST, NUST, PUCIT, LUMS, and IBA

Codeforces: Specialist – Rating 1400+; active contestant on Codeforces, LeetCode, Virtual Judge, and ICPC Online Judge for the past 2 years
